

Language Identification Organizer

Listen closely and check off each sentence or partial sentence as you hear it.

One number that contains multitudes.

Now the number is put out by Steve Landefeld of the government's Bureau of Economic Analysis.

For instance, it's skewed by how well people at the top are doing

That has made the simple average of something like GDP per capita, personal income per capita, less meaningful to the average person

If you stay home with the kids, no GDP

Environmentalists like to point out that a lot of industries are boosting GDP by doing damage to the environment

So, even though the loss of oil revenues and shrimp sales were factored into GDP, nothing was subtracted for the oiled pelicans, nothing was removed for the environmental damage itself

The worst thing that happens is we kill people prematurely

So, you mean the view over the Grand Canyon, if it's hazy, that has a cost associated with it

You can, in theory, deduct that total from GDP
